Questions on Lesson 9.3?

Answer these questions to help you review.

Exterior Ls in a circle thm.

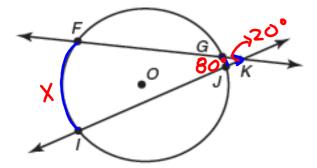

Determine mfl.

m LK = 20°

M LK = 20°

 $m \angle K = 20^{\circ}$

 $mGJ = 80^{\circ}$

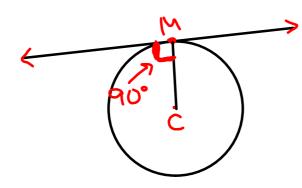

Interior Ls of a circle thm.

 $m\widehat{KM} = 120^{\circ}$

m L J L N = { (120+100) mWLN= 1/2 (220) mWLN= 110° m/ KLJ= 70°)

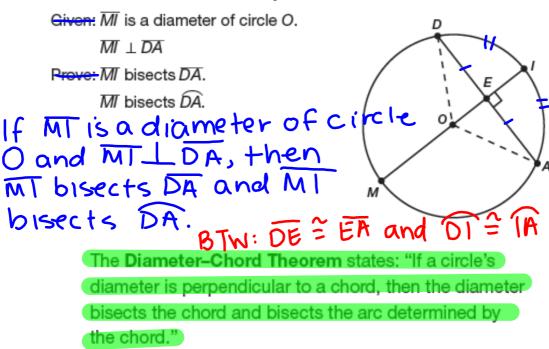

Color Theory Chords

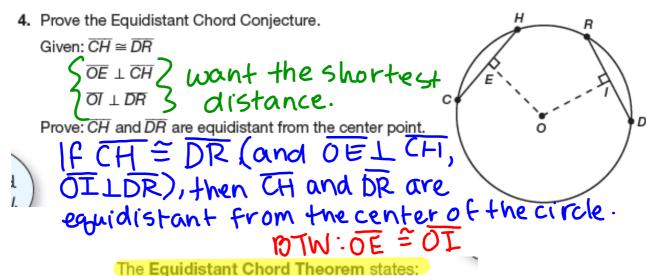

pg.689 & 691 in your book

2. Prove the Diameter-Chord Conjecture.

pg.693 in your book

"If two chords of the same circle or congruent

circles are congruent, then they are equidistant

from the center of the circle."

pg.694 in your book

The Equidistant Chord Converse Theorem states: "If two chords of the same circle or congruent circles are equidistant from the center of the circle, then the chords are congruent."

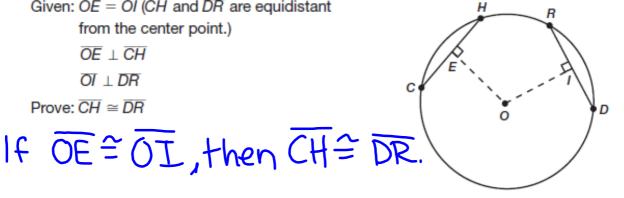

5. Prove the Equidistant Chord Converse Theorem.

Given: OE = OI (\overline{CH} and \overline{DR} are equidistant from the center point.)

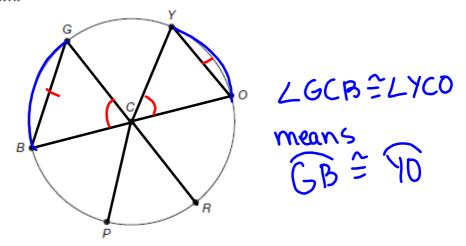

OE \(\times \)CH

OI \perp DR

Prove: $\overline{CH} \cong \overline{DR}$

1. Consider circle C shown.

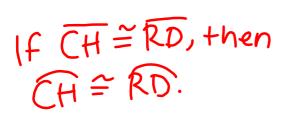

- a. Draw two congruent chords.
- b. Draw four radii by connecting the endpoints of each chord with the center point of the circle.

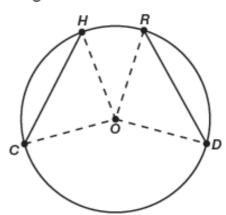

The two central angles formed by each pair of radii appear to be congruent; therefore, the minor arcs associated with each central angle are also congruent.

This observation can be proved and stated as a theorem.

pg.697 in your book

2. Prove the Congruent Chord-Congruent Arc Theorem.

Given: CH ≅ DR

Prove: $\widehat{CH} \cong \widehat{DR}$

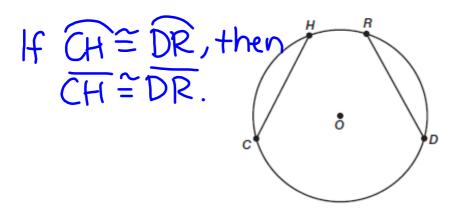

The Congruent Chord-Congruent Arc Theorem states:

"If two chords of the same circle or congruent circles are congruent, then their corresponding arcs are congruent."

pg.698 in your book

The Congruent Chord-Congruent Arc Converse Theorem states: "If two arcs of the same circle or congruent circles are congruent, then their corresponding chords are congruent."

3. Prove the Congruent Chord-Congruent Arc Converse Theorem.

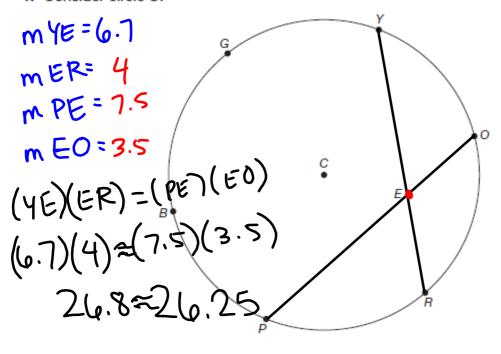

Given: $\widehat{CH} \cong \widehat{DR}$

Prove: $\overline{CH} \cong \overline{DR}$

Segments of a chord are the segments formed on a chord when two chords of a circle intersect.

1. Consider circle C.

- a. Draw two intersecting chords such that one chord connects two primary colors and the second chord connects to secondary colors.
- **b.** Label the point at which the two chords intersect point *E*.
- c. Use a ruler to measure the length of each segment on the two chords.

The product of the lengths of the segments on the first chord appears to be equal to the product of the lengths of the segments on the second chord.

This observation can be proved and stated as a theorem.

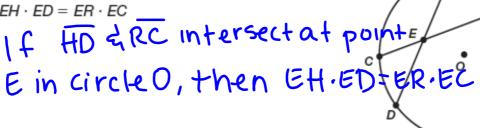

pg.699 in your book

2. Prove the Segment-Chord Conjecture.

Given: Chords HD and RC intersect at point E in circle O.

Prove: $EH \cdot ED = ER \cdot EC$

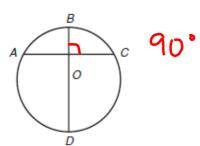

nts points u the imilar.

The Segment-Chord Theorem states that "if two chords in a circle intersect, then the product of the lengths of the segments of one chord is equal to the product of the lengths of the segments of the second chord."

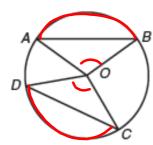

NOT in your book

1. If diameter \overline{BD} bisects \overline{AC} , what is the angle of intersection?

Diameter-chord thm.

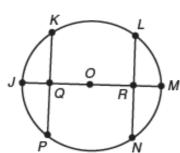

17. If $\angle AOB \cong \angle DOC$, what is the relationship between \overline{AB} and \overline{DC} ?

AB = DC

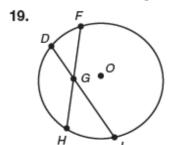

Congruent chord-congruent arc converse thm.

4. If $\overline{KP} \cong \overline{LN}$, how does the length of \overline{QO} compare to the length of \overline{RO} ?

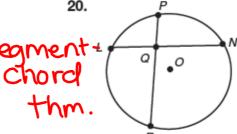

equidistant chord thm.

Use each diagram and the Segment Chord Theorem to write an equation involving the segments of DG·GJ=FG·GH La · an = Pa · ar the chords.

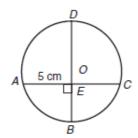

20.

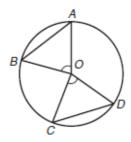

NOT in your book

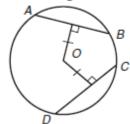

7. If BD is a diameter, what is the length of EC?

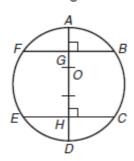

9. If the length of \overline{AB} is 24 centimeters, what is the length of \overline{CD} ?

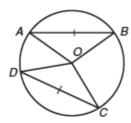

8. If the length of \overline{AB} is 13 millimeters, what is the length of \overline{CD} ?

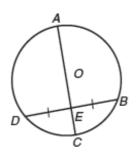

10. If the length of \overline{BF} is 32 inches, what is the length of \overline{CH} ?

11. If the measure of $\angle AOB = 155^{\circ}$, what is the measure of $\angle DOC$?

12. If segment \overline{AC} is a diameter, what is the measure of $\angle AED$?
