Topic: Reflecting Images

©2013 http://flic.kr/p/71k2MR

1. Reflect $\triangle ABC$ across the line $y = x$. Label the new image as $\triangle A'B'C'$. Label the coordinates of points A', B', C' . Connect segments AA' , BB' , and CC' . Describe how these segments are related to each other and to the line $y = x$.

x & y values change signs.

2. On the graph provided to the right, draw a 5-sided figure in the 4th quadrant. Label the vertices of the pre-image. Include the coordinates of the vertices. Reflect the pre-image across the line $y = x$. Label the image, including the coordinates of the vertices.

The diagram shows a coordinate plane with a grid. A triangle with vertices labeled A, B, and C is plotted in the third quadrant. The vertices are A(-4, -2), B(-6, 3), and C(-3, 5). A second triangle, A'B'C', is plotted in the first quadrant, representing the reflection of the first triangle across the line y = x. The vertices of the reflected triangle are A'(4, 2), B'(6, -3), and C'(3, -5). The line y = x is drawn as a solid diagonal line passing through the grid. Segments connect corresponding vertices between the two triangles, such as AA', BB', and CC', illustrating their perpendicularity to the line of reflection.

4. Figure 1 is the graph of a sound wave. The height (or depth) of the graph indicates the magnitude and direction $f(x)$ reaches from the norm or the undisturbed value. In this case that would be the x-axis. When we are only concerned with the distance from the x-axis, we refer to this distance as the **amplitude**. Since distance alone is always positive, **amplitude** can be described as the absolute value of $f(x)$. Use the graph of a sound wave to sketch a graph of the absolute value of the amplitude or $y = |f(x)|$.

time

Amplitude

figure 2

5. Figure 2 is a table of values for $g(x) = (x + 3)^2 - 9$. What values in the table would need to change if the function were redefined as $h(x) = |g(x)|$?

x	g(x)
-8	16
-7	7
-6	0
-4	...

Simplify. Write the answers in simplest radical form. Some answers may consist of numbers with no radical sign.

8. $(-7 - 2\sqrt{5}) + (6 + 8\sqrt{5})$

9. $(-10 - \sqrt{13}) - (-11 + 5\sqrt{13})$

$$\begin{array}{r} -10 - \cancel{\sqrt{13}} + 11 - \cancel{5\sqrt{13}} \\ \hline 1 - 6\sqrt{13} \end{array}$$

10. $(4 - \sqrt{50}) + (7 + 3\sqrt{18}) - (12 - 2\sqrt{72})$

11. $\sqrt{98} + \sqrt{8}$

12. $(-2 - 7\sqrt{5}) + (2\sqrt{125}) - 3\sqrt{625}$

13. $(3r^2 - 8\sqrt{3b^2}) - (2r^2 - 3\sqrt{27b^2})$

$\sqrt{x^2} = x$

$\sqrt{5} + (2\sqrt{125}) - 3\sqrt{625}$

13. $(3r^2 - 8\sqrt{3b^2}) - (2r^2 - 3\sqrt{27b^2})$

$$\begin{aligned} & 3r^2 - 8\sqrt{3}\cancel{b^3} - 2r^2 + 3\sqrt{27}\cancel{b^2} \\ & r^2 - 8b\sqrt{3} + 3b\sqrt{3} \\ & r^2 - 8b\sqrt{3} + 9b\sqrt{3} \\ & \boxed{r^2 + b\sqrt{3}} \end{aligned}$$

that $x \geq 0$. Simplify $\sqrt{x} + \sqrt{x^3} + \sqrt{x^5} + \sqrt{x^7} + \sqrt{x^9} + \sqrt{x^{11}} + \sqrt{x^{13}} + \sqrt{x^{15}}$. (no rational exponents.)

 Graphing Absolute Value Functions WKS

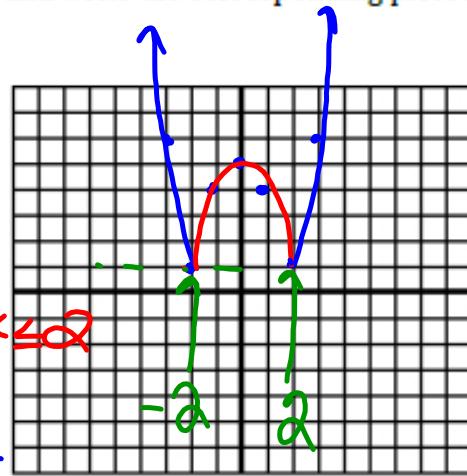

Finish 4.4 from page 19

Graph the following absolute value functions and write the corresponding piecewise functions for each.

$$11. g(x) = |x^2 - 4| + 1$$

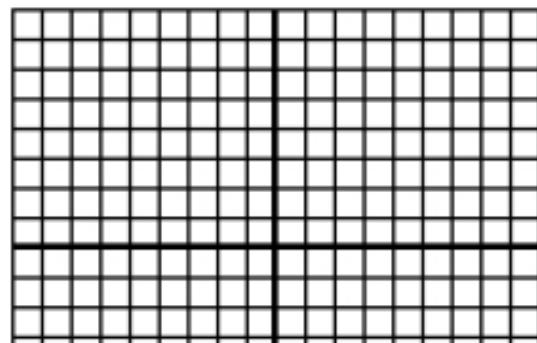

Piecewise:

$$g(x) = \begin{cases} -(x^2 - 4) + 1, & -2 \leq x \leq 2 \\ (x^2 - 4) + 1, & x < -2 \text{ and } x > 2 \end{cases}$$

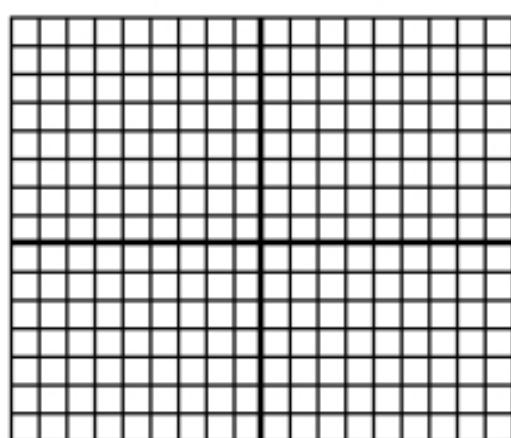

$$12. g(x) = |(x + 2)^2 - 4| + 3$$

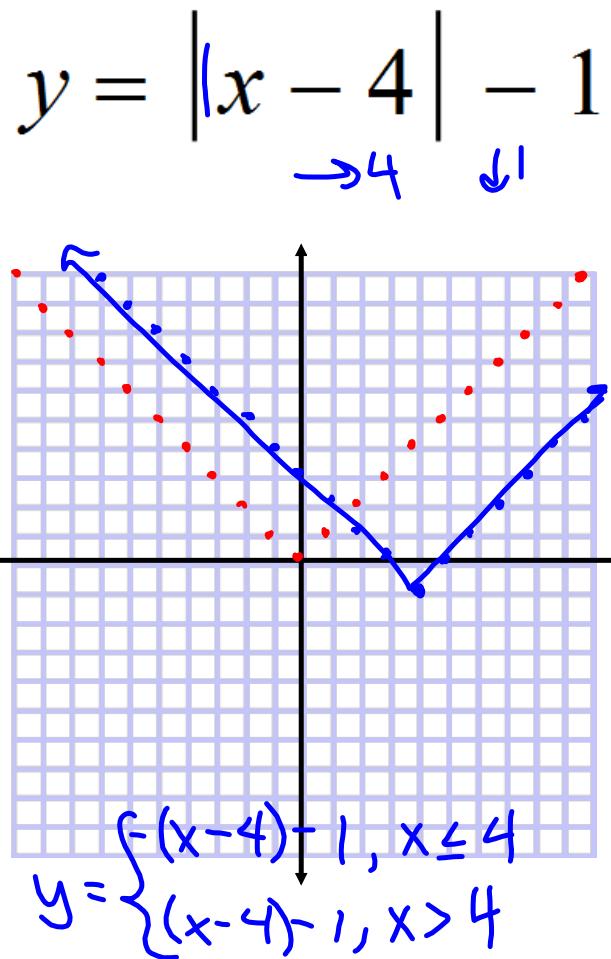

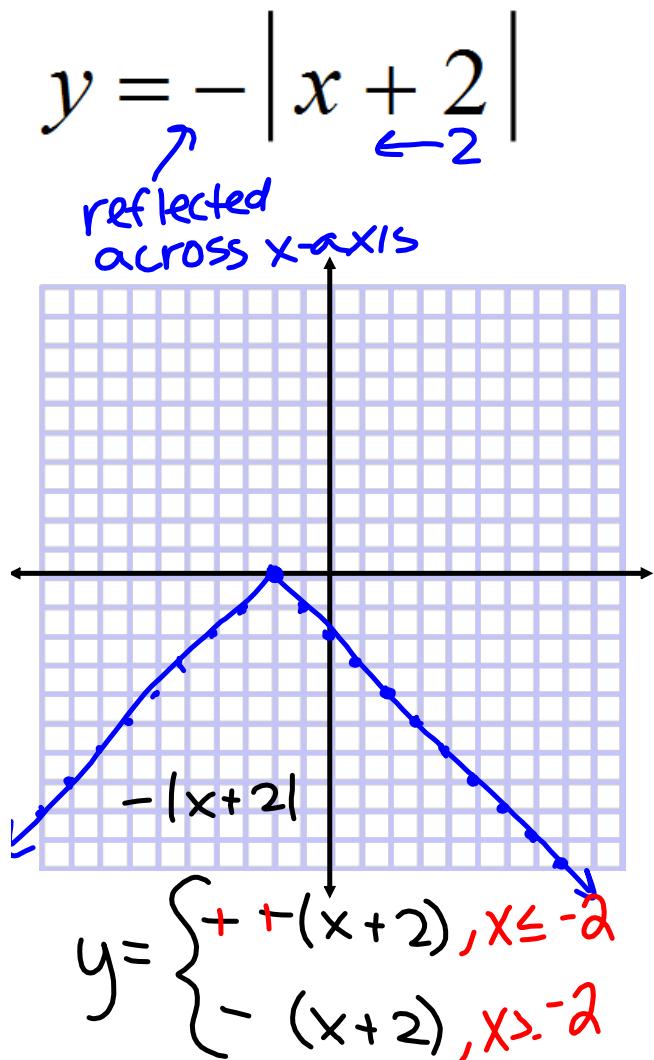

Piecewise:

$$13. g(x) = |(x - 3)^2 - 1| - 2$$

Piecewise:

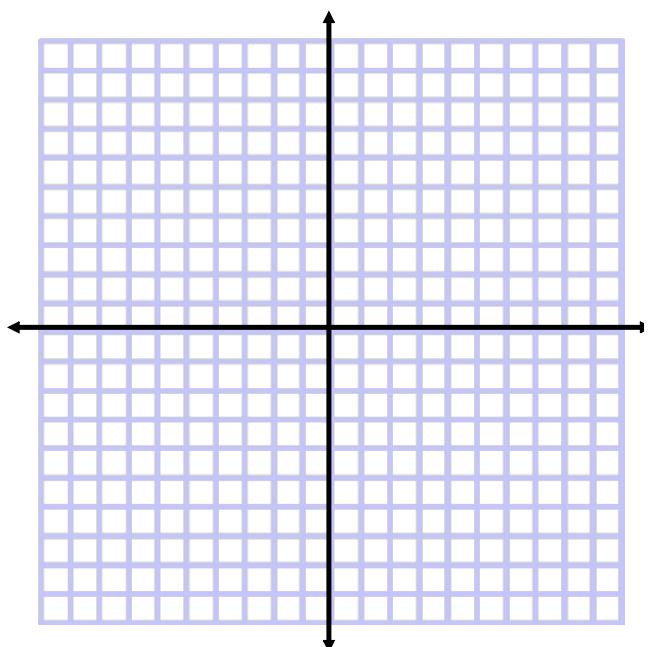

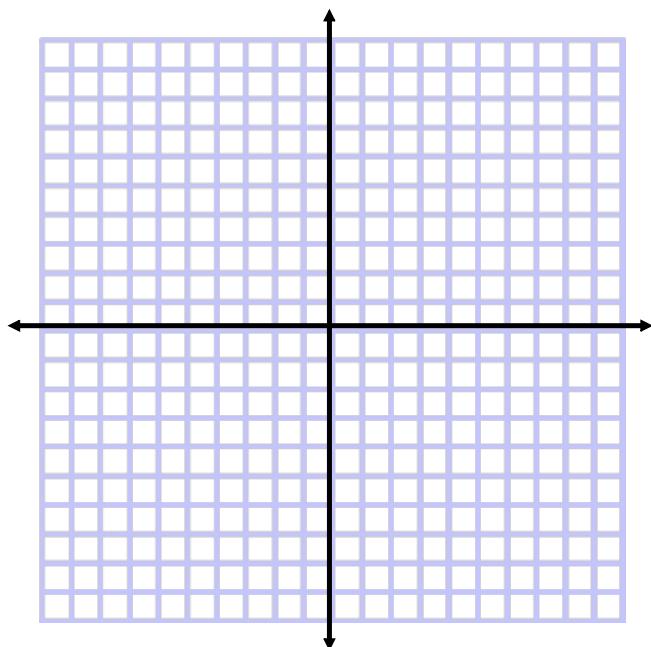

$$y = - |(x - 4)^2 + 4|$$

~~↓4~~ ↑4

$$y = |(x + 1)^2| - 1$$
