Pascal's Triangle $(x+y)^n$

$(x+y)^n$
 (15) $(x+7)^4$
 $x=x$
 $y=7$
 $n=4$
 $6x^2y^2$
 $6x^2 \cdot 7^2$
 $294x^2$
 (16) $3x^2y^1$
 $x=2$
 $y=y$
 $n=3$
 $3(2)^2 \cdot y$
 $12y$

FIRST!
 (17) $-3(x-4)(x-2i)(x+2i)$
 $-2i$
 $(-3x+12)(x^2 + 2ix - 2ix - 4i^2)$
 $(-3x+12)(x^2 + 4)$
 $-3x^3 - 12x + 12x^2 + 48$
 $-3x^3 + 12x^2 - 12x + 48$
 (24) $x^1(x^2+4) = x^3 + 4x$

7.

Pascal's Triangle

①⑥ ; not ÷

①⑦ ÷ not ;
